

Bimba Product

T SERIES LINEAR THRUSTER

Industry/Market Segment

TEXTILE MANUFACTURING

TEXTILE MANUFACTURING

Application Description

Twenty-six Bimba Linear Thrusters are being used on a conveyor line, that includes a bar code scanner, to divert shoeboxes as they are off-loaded from a trailer.

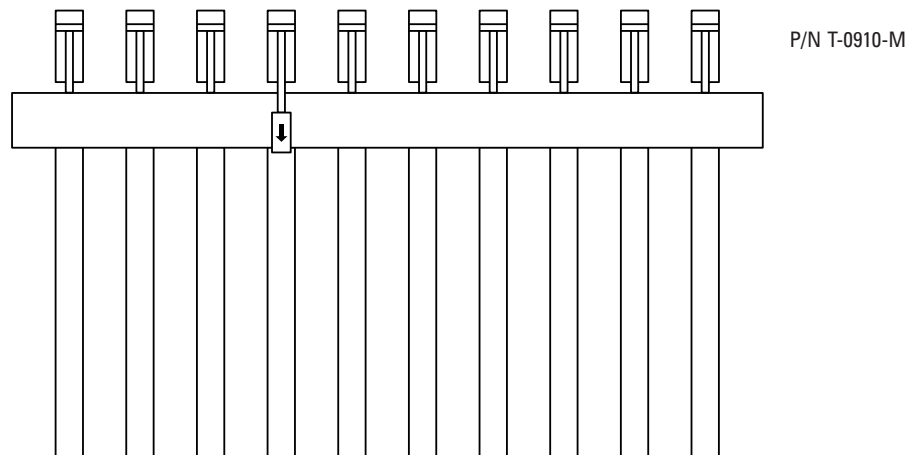

Why Was Bimba Specified

The Bimba Linear Thruster was specified because of its reliability. It offers smooth guided motion and is available with composite bearings or ball bearings.

Application Results

Previously, the shoeboxes were off-loaded and sorted manually. This proved to be a very labor-intensive task. With the addition of the Linear Thrusters to the process, the entire operation has been automated — a significant cost savings in terms of both time and money.
