

## Rectangular Stopper Actuator

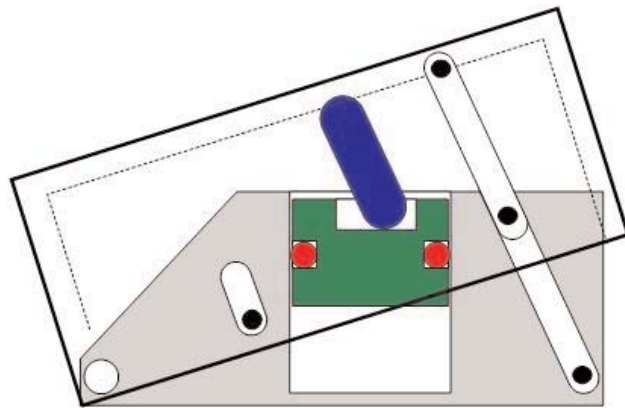

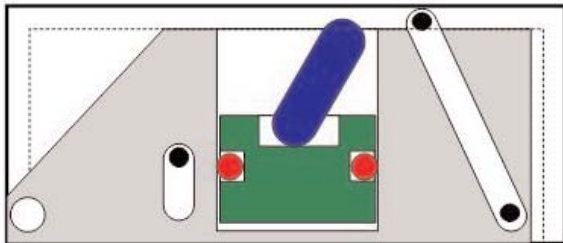

A customer in the wood processing industry needed an edge guide for their large routing tables that could be easily moved out of the way. Bimba developed a rectangular stopper actuator with a hard coated anodized body that could extend to stop the product and then retract flat, allowing for the product to be moved across the table. The “box” design added additional bearing area and load support.

“Box-top” geometry provides stability and a large bearing area

### Specifications

- Body: Housing anodized aluminum
- Bore: 0.75”
- Stroke: 0.83”
- Port: 10-32
